

PeerStory: StorMagic SvSAN

This PeerStory is a collection of quotes from a real user sharing their experience using StorMagic SvSAN on PeerSpot.

Georgi P.

Global Data Center & Disaster Recovery Manager at Curium Pharma

Use Case

Our use case is that we have small manufacturing sites that require some kind of edge technology to provide virtualization. Bigger platforms do not fit and are very expensive for these small sites. We chose StorMagic SvSAN because it is easy to implement and maintain as we do not have permanent IT staff on these sites.

Valuable Features

What we like the most is how easy it is to implement. I am able to bring fully functional virtual infrastructure in a matter of two hours with StorMagic SvSAN, compared to other technologies that are very complex.

“Scaling is very easy with StorMagic SvSAN. We can simply add more ESX hosts to a cluster and deploy additional VSA controllers without any issues.”

“This solution has allowed us to achieve unification and standardization across our sites, making it easy to install and maintain.”

StorMagic SvSAN does not have hardware-specific requirements and is hypervisor agnostic, which makes it easier compared to competitors like HPE SimpliVity that are limited to specific hardware.

Results

StorMagic SvSAN has allowed us to **create robust and cost-effective hyper-converged platforms on our edge manufacturing sites** where reliability and high availability are critical for our production.

ROI

StorMagic SvSAN helped us save around sixty percent on previous costs. Before, we incurred high expenses maintaining hardware and licensing for third-party solutions. In the long run, **StorMagic SvSAN has been very cost-effective.**
